

ABSTRACT

A communication account system for dynamically providing communication accounts to communication devices for immediate transfer to users. The communication account system comprises a communication account server and an interface system coupled to the

5 communication account server. The communication account server is configured to validate a communication device in response to a communication account request message from the communication device, associate a communication account with the communication device in response to the validation, and generate a response message indicating the communication account in response to the association. The interface system is configured to receive the first
10 message from the communication device and transfer the second message to the communication device for the communication account server.
